

Open Compute Cabinets OCP *OCP Serie*

Hammond has long supported the EIA-310-E standard, which has been the foundation of our cabinet offering since its inception. This standard remains the most widely adopted and stable platform across a broad range of IT and industrial applications.

While we recognize the growing interest in Open Compute Project (OCP), particularly in AI and hyperscale environments, the ecosystem continues to evolve rapidly. The OCP standard undergoes frequent revisions, and multiple vendor-specific variations have emerged. This fragmentation makes it challenging to develop a single, scalable cabinet solution that meets the full range of implementation requirements.

Given these factors, Hammond has made a strategic decision to remain focused on delivering high-quality, reliable solutions based on the established EIA-310-E standard. This allows us to provide consistent availability, proven compatibility, and long-term product stability for our customers.
