RACK BASICS[®]

A HAMMOND BRAND

The RB-CW wall-mount rack bracket is a compact, cost-effective solution for mounting 19-inch rack equipment directly to a wall in low-density network environments. Designed for simplicity and efficiency, it provides reliable support for patch panels, switches, and lightweight equipment without the size or cost of a full rack or cabinet.

Commonly used in telecom backboards, small network closets, and retail locations, the RB-CW is ideal for installations where space is limited and open access is acceptable. Compared to enclosed cabinets or larger rack systems, it offers a straightforward, budget-friendly option for basic network infrastructure deployments.

When Another Product May Be a Better Choice

- The **VPB** Series is a better fit for deeper equipment installations requiring additional internal depth within a wall-mount form factor.
- The **SDC** Series is better suited for applications requiring a secure enclosed cabinet with integrated side access and equipment protection.
- The **HLP** Series is the preferred choice for higher load capacity applications requiring adjustable rack rails and greater mounting flexibility for IT and networking equipment.
