**FOR IMMEDIATE RELEASE**

## **Hammond Manufacturing Launches New Swing-Out Wall Mount Cabinet**

GUELPH, ON - Hammond Manufacturing Co. Ltd. (TSX: HMM.A) launches the new swing-out wall mount cabinet, a new addition to its already popular line of wall mount racking products. The new Hammond Wall Mount (HWM) cabinet was designed with the technical professional in mind. The new design enables the cabinet to be installed in less time using fewer installers than similar cabinets of its size.

The strength of our new cabinet comes from the heavy duty spring hinge pin, says Steven Menegotto, Project Leader. "We wanted to build a smarter cabinet, one that could be installed in minutes", said Menegotto. The use of the heavy duty spring hinge design has been used for years by Hammond Manufacturing for other applications.

The HWM includes a vented front door and side panels that were specifically designed for high capacity servers, switches and power management devices. Menegotto added, "The HWM Series is available in stock in four heights and three depths for a total of twelve sizes. Using Hammond's modification services, the HWM can be modified to fit a variety of applications."

Hammond Manufacturing recently showcased the HWM Series at the CANASA Canadian Security Expo in Toronto, ON. Response has been so positive from the show that Hammond has increased their inventory to support the demand.
